

	picture	name	first name	section	1443489: What is something about you that I wouldn't learn from you being in class?	1443490: What has your experience with physics been like in the past? Good/bad/no experience and why?	1443491: What do you want to be when you grow up?	1443492: Do you have any questions/concerns/worries about the class? I can't necessarily answer these for you here but I'd like to know generally. If not, then is there anything you are excited about learning in physics or hope we cover?	1443493: Since this is also a test of the LockDown Browser, what are your thoughts about it as a deterrent to people trying to get outside help on their quizzes or exams? Do you think it will work? Do you know of how people get around it? Do you care if others around you are cheating in some way?
0		Cook, Karis	Karis	1	I grew up in Sub Saharan Africa. I moved back to the USA when I was sixteen. I have 3 little brothers, 2 dogs, and a horse.	I took AP physics in high school. Unfortunately I did not finish the course as my parents had to move again. It was great though.	Medical doctor	I don't have any concerns. I think this will be my favorite class this semester.	I think the LockDown Browser is pretty affective. It seems to stop cheating as far as I've seen.
1		Crawford, Greyson P.	Greyson	1	i absolutely love the gym, and my dogs.	no experience because we had an awful teacher in highschool	mechancial engineer	im a little worried about being a freshman with juniors and seniors	i think it works good, i think the only way around it is another device, and i would prefer no cheating
2		Deaton, Talia L.	Talia	1	I was born in georgia and then grew uo in Kentucky, and now my parents live in Charlesotn.	I have never had Physics before, so everything is new to me.	Dentists	I am worried about understanding the content on my own, easily to follow along with on the notes and in class but more difficult on my own.	I do think lockdown browsers works very well and I have no clue how people can get around the camera. If people decide to cheat that is on them and something I can't change them from doing.

3		Faulkner, Gabrielle G.	Gabrielle	1	I'm a big book nerd and I love pumpkin spice lattes.	This is the first physics class I have taken, so I really don't have any expectations other than it being very math heavy.	Physical Therapist for Athletes	I'm concerned that some of the concepts will be difficult to wrap my head around since they're so different from the other sciences that make sense to me such as biology or anatomy. Otherwise, I'm excited to learn a completely new field of science, and I typically enjoy math so I'm not too worried about that aspect.	I think lockdown browser is a good way to make sure people aren't using other sources to cheat on exams, however, I will say that it adds another level of subconscious pressure to know that I'm being watched, if only by a webcam. This will deter students from cheating, but also tends to make me more anxious and sometimes affects my test performance. Personally, of course I would rather students not cheat on exams, but at the end of the day it's up to them to learn the material. If they choose to cheat, they're only selling themselves short on a true understanding of the concept.
4		Ganley, Dominic M.	NaN	1	NaN	NaN	NaN	NaN	NaN

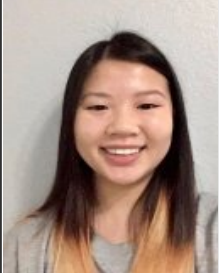

5		Gonzalez, Raphael E.	Raphael	1	I am in the Army National Guard and intend to serve full time as a physical therapist upon graduation.	It has always come more naturally to me than most of the other sciences. However, I still struggle with it. Nonetheless, I have always found it quite fun.	A Colonel in the U.S. Army.	No concerns. I understand that the grade I receive will be a result of how much work I put into the class. I have always enjoyed applying the laws of thermodynamics, so that is perhaps something I am excited to potentially further explore.	I have never felt the urge to cheat on an exam, however, I can not think of many ways to get around it. It upsets me when others cheat, especially when I study hard for an exam and get a lower grade than I wished while those who cheat simply put in no effort and get a better result.
6		Hansard, William C.	Crawford	1	I love watching stand-up comedy (Tom Segura and Shane Gillis specifically)	Not very good. My high school teacher was not very good or engaging at teaching physics. We learned the basic stuff but that was over 5 years ago. It has always been very tough for me.	A physical therapist who works with patients with prosthetics, helping them rehabilitate, restrengthen, and learn how to use their new prosthetic.	I am very worried that I will not retain any information, and completely blank on the quizzes. These are a huge part of the grade and I try very hard in school, but I am just worried that it will not click.	I do not have much experience with it, but it definitely helps prevent cheating, but the camera part makes me feel anxious and not be able to think clearly. However, it is a useful tool.
7		Harper, Karalyn M.	NaN	1	NaN	NaN	NaN	NaN	NaN

8		Head, Kaylee K.	Kaylee	1	I love the outdoors, especially being out on the river, lake and beach!	I took physics during my junior year of high school. I've always loved math because of math's methodical approaches to solving problems, and this is one aspect I really enjoyed while taking physics and physics problems.	My plan as of right now is med school, but I have not decided on a specialty yet. However, I have always had a heart for kids, so I am leaning towards a career in pediatrics.	I do not have any questions yet, and I am really looking forward to the physics labs for this course! One thing I would love to learn about some of the physical properties of space, but I am not sure if they are covered in this course or not	Lockdown browser works for the most part. However, I have heard of some people cheating on it by looking at their phone, notes, etc. I have come to the conclusion that some people are just going to cheat,
9		Hooks, Bridget	NaN	1	NaN	NaN	NaN	NaN	NaN
10		Hoover, Hannah G.	Hannah-Grace	1	I love insanely sad music even though I'm a very happy and optimistic person.	I took an honors physics class, not AP, during my senior year of high school and I remember it being difficult. I don't remember how to do anything but I'm sure once we start learning more some of it will come back to me. The main thing i remember learning about was velocity and vectors.	I want to be a physical therapist that either specializes in pediatrics, specifically really really young children who are born with bone abnormalities and whatnot.	NaN	I think that having a lockdown browser during a test pretty much prevents most cheating since everything is on camera for the professors to see.

11		Hoppers, Kathryn E.	Kathryn	1	I am a member at Redeemer Community Church and am super involved there :)	Both good and bad. I took physics in high school and it was supposed to prepare us for the AP exam but my teacher did not prepare us very well for it. Overall, I did well in the class and understood the material pretty well, but my teacher was not great and I ended up having to teach myself pretty much everything which was frustrating.	I want to be a Physical Therapist for kids or maybe adults with disabilities...and then I want to be a mom.	I know the class will be a lot of work and I'm a little worried about making time for it with my schedule while balancing senior-level kinesiology courses that I also need to spend a lot of time on.	I think it works to an extent. I think the best thing to eliminate cheating would be lockdown without camera in class because I have known people that have been able to cheat despite the camera.
12		Hubbard, Lydia A.	Lydia	1	I played collegiate volleyball at a small university in Indiana for my freshman year but transferred to Samford my sophomore year so I am beginning my second year here at Samford.	I took a physics class in high school, I would say it was a good experience but I did have a student teacher for a majority of the year so it was a little bit different than the normal physics class.	After my undergraduate degree, I hope to pursue a DVM through veterinary school and eventually open up my own practice and be able to not only work in a clinical setting but also be a large animal vet who aids farmers.	I am honestly worried about the conceptual portion of physics. I am great with equations and mathematical aspects but conceptual things I sometimes struggle with.	I think LockDown browser is a great deterrent for cheating but I do know of students who have gone out of their way to try to find a way to cheat with this browser. Personally, I think if they put those efforts towards studying more instead of figuring out the perfect way to cheat, then those students would get more out of class. :)

13		Jewell, Curtis W.	Wade	1	My parents went here and now me and my brother attend Samford	no experience, it was not required in highschool	Physical Therapist	I am concered I will have to devote a lot of time to this class more than others, but thats just what has to happen sometimes	It has been used the past two years and honestly its basically impossible to cheat on without being fairly obvious and being flagged. So if some people are able to get away with cheating more power to them, but it is not a big concern because it seems impossible to do.
14		Johnson, Jakieria N.	NaN	1	NaN	NaN	NaN	NaN	NaN
15		Jones, Lacy K.	Lacy	1	I am an ex- D1 athlete who is now taking up rock climbing because I can no longer play my sport (soccer) due to health reasons.	I have had a little experience with physics my senior year of high school. But it was an online course and only covered the very basics.	A physical therapist for college athletes!	I am excited to get to the point to be able to say that I am competent in college physics! :)	I think it will work the majority of the time. The only way I could think of someone getting around it would be to share the questions with their classmates after they take the quiz/exam. I would care if others around me were cheating- I would feel like I was at an unfair disadvantage.

16		Karrh, Miller H.	Miller	1	I like to spend most of my time outside, especially once the temperature outside starts to drop	I haven't taken a physics course since my freshman year of high school, so it's been a while. I really enjoyed the class when I took it, but I don't remember much of the material	Orthopedic Surgeon	I am a little worried about the amount of work outside of class. I am on the football team and I'm taking 17 hours this semester, but I know if I manage my time wisely then I should be ok.	I personally think that Lockdown browser encourages students to think more about how they can get around the system rather than the actual material. It really doesn't bother me if other people are cheating unless it was ruining a curve that would affect my grade. It's up to other people if they want to cheat or not.
17		Lee, Sarah- Anne L.	Sarah- Anne	1	I really like theater and seeing productions. I did stage managing and acting all four years of high school so I love the performance arts and the behind the scenes stuff that all works together to make a show happen.	I took physics in high school and wasn't a huge fan. It was alright but I didn't have a good teacher who could explain the material in different ways which made it difficult.	I'm hoping to go to medical school to become a doctor specializing in forensic pathology.	I don't think I have any major concerns or worries. I'm excited to maybe broaden my understanding of physics and hopefully learn more about the subject in general and actually enjoy doing it.	In general, there are several ways I believe one could "cheat" lockdown browser even with the webcam and microphone. People could have multiple devices running with websites and answers pulled up, or hide things against their computer screen out of the camera's view. (not that I've ever done any of those things personally) But I think lockdown browser in general scares a lot of students for tests instead of preparing them to learn and study. For example, when students hear that tests will be on lockdown browser, I've rarely heard anyone who's excited about it. And that doesn't necessarily mean that students

want to cheat or will cheat on exams, but there's more of an incentive to if it's a monitored online exam. "The forbidden fruit is always the tastiest" kind of deal. I'm split between not caring and caring whether or not other people cheat on exams. In one sense, there's really no good way to stop cheating for online exams because people will always find a way, and I accept this. However, I don't ethically believe in cheating as a solution for taking online exams.

18		Lewis, Cheney Q.	Cheney	1	<p>I am very interested in taking care of myself. I grew up semi-going to a holistic doctor for my brother, which ended up having a bigger impact on me than I realized. I think food is a great healer and I am trying to learn more about how to properly incorporate different food types and movement and see how that affects my energy levels and overall well-being.</p>	<p>I have personally never taken a physics class before, so I am a little nervous. Some of my good friends are either majors or minors in Physics and love it though, so I am excited!</p>	<p>I was pre-med most of college but have recently decided I do not want to go to medical school. I am really interested in the body though and am considering PT school.</p>	<p>My only concern is that I have no experience with it. I am excited for labs especially and so far really enjoy how lab and class time is structured.</p>	<p>Personally, I am not tech savvy enough to get around it or to bother cheating using lockdown browser and webcam. I think people who really want to though usually find a way. I am not the biggest fan of the webcam things because it makes me pretty anxious, but I am getting more used to it as post-covid semesters progress. I think that the most annoying thing about cheating is when people who do it get better grades than myself, but it's their own disservice they are doing to themselves.</p>

Long, Erin  
L.

Erin

1

I'm the youngest of three siblings, the only reason I say this is because the other day one of my friends said he's really good at guessing if you're an only child, youngest, middle, etc based on the way you act and interact with people. So now that's something I pay attention to when I'm with people and there's actually some interesting studies on this topic.

No experience, I enjoy science so I avoided math/physics in high school as much as I could.

I plan on going to chiropractic school once I graduate, I am pretty set on that but I also might look into physical therapy, athletic training, or something of that nature.\n\nI also want to be content with my life/choices when I grow up, no regrets :)

I honestly have no idea what kind of curriculum/topics a physics intro course would cover, but I have enjoyed your classes so far so I'm excited to learn. I'm a little worried because sometimes it takes my mind a little longer when processing numbers, orientation of things in space, and other things like that, I don't want to be confused during class. But I'm also very Type A personality wise so I'm going to put in the work and study hours outside of class to make sure I do well as I can.

I think the people who are bound and determined to cheat are going to find a way to cheat regardless of what barriers you put in their way. On the other hand, I do think it's a pretty good deterrent for just the average person who probably won't put that much effort in to find ways around Lockdown Browser. My dad always told me whatever you shortcut is going to find a way to come back and bite you. So I don't necessarily put that much thought into others around me cheating because it just hurts them in the long run (aka the midterm and final that you have to take in person).

20		Loveless, Tatum L.	Tatum	1	I want to get my skydiving liscense after college. I am currently a broke college student so I do not have the funds to finance my goal of solo skydiving. I have been tandem skydiving before, but I really want to try doing it by myself. So once I get a real job I hope to save up money and jump out of a plane numerous times. Hopefully I do not die because that would stink to survive college and then die right when I get out.	I have never taken physics, so I am extreamly nervous about this class.	I want to be a physical therapists who primarily works with elite athletes.	If I miss a class, should I be good in catching up by watching that weeks videos? \n\nAnd to be honest I do not know a single thing about physics, so I am excited to learn what physics is all about.	I think LockDown Browser is a strong deterrent from people seeking outside help. I do think it will work because it is a good system. To be honest, I do not know how people get around it and if they do probably takes a lot of effort. And I do care if others around me are cheating because if I put in the effort to study, I hope others are doing the same and not just using shortcuts.
21		Mathison, Si E.	NaN	1	NaN	NaN	NaN	NaN	NaN
22		McBane, Emma C.	NaN	1	NaN	NaN	NaN	NaN	NaN

23		McGough, Cole	Cole	1	I enjoy collecting retro video games and their consoles as a major hobby of mine. I also really enjoy doing art in my free time as well!	In the past I have had a very positive experience with physics. In high school, I really loved the class and found it all very fascinating.	I want to be a zoologist who studies the genetics and other intricacies of the weasel family, Mustelidae. I also have an interest in becoming a biology professor.	I do not have nay concerns regarding this class! I do not have any particular areas of physics I'm interested in covering but I am quite sure all of it will be very useful information.	I do find the LockDown Browser to be a deterrent for cheating. Although, the browser can be very cumbersome and takes a while to get started on an exam/quiz because of all the checks it has to do such as facial detection. There is certainly a lot of give and take with it.
24		Mcleod, Molli A.	Molli	1	Something that you would not have learned about me in class is that I can be very scatter brained. I'm ADHD and a part of having this kind of brain function is I have interests in all kinds of things. I love reading, anime, Star Wars, hockey, skateboarding(just riding, I don't do tricks), makeup, as well as many others. I have only recently been offically diagnosed but I've always had multiple interests at a time and often go through obsessive phases, of sorts. I'm slowly learning	I have not had physics since my senior year of high school which has been a little over 2 years now but I do remember enjoying it. A lot of the mathematics are algebraic which I understand relatively easily as compared to more geometry/theoretical mathemetics I tend to struggle with.	I eventually want to be an Occupational Therapists who works with children who have cerebral palsy, autism, etc. I would like to work in a place that also has ABA, speech therapy, trauma therapy, along with other forms of therapy that these kids often seek so that when they come to see me they get all of their doctors appointments in one go. I would also like to own some form of business that has nothing to do with my major and is strictly for fun such as a bookstore.	I currently do not have any questions, I am just excited for something new as far as classes. I was a pre-pharmacy major before I recently switched to exercise science and to see something so different from chemistry is refreshing as far as sciences go.	LockDown Browser makes it less likely for people to cheat as there is more fear of them getting caught but that does not neccessarily mean people won't. Most people will probably try to get around it by keeping thier phone out of sight of the camera but still in a place that it can still be used. As far as it bothering me if people cheat I often do not know and anytime I have known it's because of a class that was unnesscarily difficult.

					from research, the experience of others, as well as my own personal experience what all occurs with having ADHD as an adult and just how much it can be affecting a person's life. There's a lot more to this disorder than people realize.				
25		Moore, Lydia P.	Lydia	1	I am a music major and I play the violin. I also really enjoy sending and receiving emails.	I took AP physics in highschool, and I loved it. My teacher used to be a college professor and he was very hard on us. This made me work hard and learn a LOT. The real world applications of math just work better in my head than typical math classes.	I want to be a chemist.	I hope we cover some astronomy math.	I think lockdown works pretty well. At the moment the wifi on campus has been so spotty I can see it causing problems for exams if the issues don't get resolved soon.

Noble,  
Rebecca L.

Rebecca

1

I am on the fast-track physical therapy program here, so even though I am a junior, this is my last year taking undergraduate level classes. This makes it feel like my senior year, so I am trying to make the most of it. I am also a pretty involved student on campus. I am involved in Greek Life, even though I am currently disaffiliating because I am also a freshman RA in Beeson Woods. I serve as a Wellness Ambassador to the Counseling and Wellness office to promote holistic wellness with an emphasis on mental health across campus.

I have never taken physics before. I took biology and chemistry during high school. I'm not really sure why I never took physics. It's probably because science was close to being my least favorite topic (history easily takes the crown for that), so I did not want to take anymore than was required. However, so far, I have enjoyed what we are doing in class. I know we have not gotten into a lot of new material yet, but I am excited to see how the semester goes.

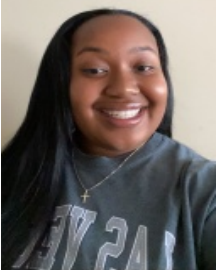

I would like to be a physical therapist. I will be attending Samford's PT school starting in May. I am not sure what setting I want to work in, but I know I do not want to work in a hospital and I DO want to work with kids at some point in my life.

I think one of my main concerns is that I usually do not do well with a flipped classroom. I actually tend to have a very negative outlook on them, but I am trying to refrain from letting that define my performance for the class. I had a flipped classroom in biology last year and absolutely hated it. I do not have very much time outside of class, so sometimes it is hard for me to find time to sit down and watch multiple lectures and have learned something before class. That being said, I am going to try my best and see how it goes. Other than that, I am excited to be learning physics. Because I am came into Samford with dual enrollment/AP credits, I have not had to take a math class at all since I've been here, but I enjoy math, so what we have covered so far has been interesting to me.

I think it helps but only to a certain extent. I am fully aware that people still find ways to cheat. We had to use lockdown browser in chemistry last year. We were allowed to have a notecard of information and a calculator with us, so the system was less sensitive to us looking down. One time I made a 70 on an exam and so did another girl in my class, and she told me she had her whole notebook out and used her phone. It did not flag her exam. It does bother me when people around me are cheating, but I am fully aware that I cannot do anything about it. I just mind my own business and don't do it. If I had a solution, I would offer it up, but I don't. I think LockDown Browser is the only thing you could do to have the experience as being the same as in-person exams.

27		Osgatharp, Joshua B.	Josh	1	I used to be allergic to peanuts, but I did an immunotherapy treatment to become unallergic. I started with peanut protein mixed in with yogurt, and over a year, I built up to 12 peanuts and now eat 5 a day to maintain the immunity.	no experience, but I do not like math that much.	MD. not sure what specialty yet, but something in surgery for sure. I am leaning towards orthopedic surgeon or a urologist.	I am a bit worried with how well I will do in the class considering I have no experience with physics but other than that I am not too worried and do not have any questions.	I think it will work. I am sure there are ways people get around the lockdown, but I have never bothered figuring them out. I am not too concerned if other people are cheating, because it is only hurting them in the long run.
28		Palmer, Amelia G.	Millie	1	I skipped a year of high school and I'm addicted to coffee... and maybe those are connected? :)	I took physics in fourth grade and loved it, but I haven't done much since then. I find the concepts intriguing and the math enjoyable; I like being able to find a right answer to things.	Either a physical therapist or a judge- two very different paths! Currently trying to figure that out.	No concerns! I am fascinated by astrophysics, but I'm not sure if that falls within the scope of this class. Excited to find out!	I think LockDown Browser is the best available way to handle remote exams and quizzes, but it isn't perfect. I have heard of people finding ways to cheat. That bothers me because it gives professors and administration an inaccurate picture of how well the class is learning, which can negatively impact a student's peers and classmates. Also, cheating is dishonest, morally wrong, and ultimately harmful to a student, but I don't think I need to explain that.

29		Pridemore, Aubrey H.	Aubrey	1	I love to travel. And I just started a new hobby of baking cakes from scratch and also decorating them!	I had physics in high school, overall it was such a good experience. My high school teacher made it easy to understand and he made the material apply to things which really gave the class a purpose.	That is a great question! For the past year or so I have thought that I wanted to go to optometry school and be an optometrist. But after talking with several doctors recently I am not quite sure if I want to be an optometrist still. I am really interested in medicine particularly, endocrinology and rheumatology. I would be thrilled to get to study autoimmune disorders I just think they are so fascinating.	I am worried about preparing for the midterm and final. Other than that I am excited for this class.	In my opinion if people want to cheat they will always find a way to cheat. I think lockdown browser is sufficient. I only hate people cheating when they actually get a better grade than me.
30		Ramsey, Mya J.	Mya	1	I love to paint and draw.	I have no experience with physics... and I am terrified	I plan on becoming a Plastic Surgeon that is in the ER	I worry that I might not be able to grasp concepts that easily. I am not that great with math and I am a little concerned with how I might do. I am hoping for a pretty great learning experience!	I think Lockdown Browser works pretty well... It seems to work for many classes and has been used plenty of times.

31		Sinn, Madelynn J.	Maddie	1	I really love hot yoga and cycling classes.	I haven't ever taken a physics class. I learned some basic ideas in calculus and science classes.	Physical Therapist	I am concerned that I will struggle because I have never taken physics before but challenge accepted.	I think that LockDown is pretty good at deterring people from cheating. I am sure that someone will figure out a way to get around it and cheat but I honestly don't care what other people do on their tests. I would rather people not cheat but what they do is on them.
32		Snowden, Jerica C.	Jerica	1	I am a ballroom dancer and have been in multiple competitions and showcases.	I had a high school level physics class in eighth grade just for kicks and giggles. I ended up liking it enough to not be upset that I have to take it in college. I believe I ended up getting an A in the course, so it wasn't too bad.	I have always believed I would be in the medical profession, so I am working on becoming a PT or maybe an athletic trainer. But recently I've been leaning toward religious studies and comparing and contrasting religions and helping people grow their faith. So I might go back to school later if I still feel that way (since I am too faar in my major to change it).	The only concern I have is if the test is actually similar to the homework. All the sciene and math classes so far, I've excelled in the homework and have helped my peers, but then the test comes out and I don't recognize anything. They are nothing alike typically, and that scares me for these upcoming science classes I have to take.	I think it works. I have never wanted to cheat, but if I did, I wouldn't because of the webcam. I do know some people that have figured out a way around it, but I have no idea how, and I do not want to know. I care if people are cheating because if they cheat and do better while I don't cheat and don't do as well, I look stupid because no one knows that they cheated. If that makes sense.

33		West, Merideth K.	Merideth	1	Something that you wouldn't learn about me from class would be that I know every pitch perfect riff off.	I took AP Physics 1 in high school, but it was sophomore year because I doubled in science classes. I really enjoyed the class and received an A.	Either a dentist or a physical therapist, but I want to be known as a good person, great friend, and a servant of the Lord regardless of my job.	I'm a little worried for the quizzes and whether or not they will be similar enough to the worksheets done in class for me to get good grades on them. I feel if I put in the work early to study and learn the material I will do well.	I enjoy taking quizzes on LockDown Browser because I know it will keep me and others accountable to know the material. I believe this is an effective way to minimize cheating and I think it will work well. I have heard of people trying to get around it and still cheating regardless, but at the end of the day it will only make them feel bad about themselves. As long as I am keeping myself accountable I will not care if others are doing things they shouldn't because it won't come back on me.
34		White, Chloe A.	Chloe	1	I am from Indiana and I used to play volleyball and run Unified Track.	I have never taken a physics course, but I am ready to learn.	I want to be a physical therapist.	I am worried I may not understand the content because I have never taken a physics course.	I do not think it will work because it has the camera and it has audio around it. I do not know how people get around it. If they do, they're very sneaky. In the end, cheating will not help because it shows they did not learn the content. I do care if others are cheating because it is not fair for other students who worked hard studying.

35		Williams, Mary M.	Mary Morgan	1	My favorite place to eat in Birmingham is Taco MaMa.	No experience yet.	I want to be a physical therapist for a professional or collegiate sports team one day.	None at all! I'm excited for the class this semester!	I think this definitely will serve as a deterrent to people trying to get outside help. I think it will work. I will not be cheating on exams because I know that is wrong and will not help me in the long run.
36		Bennett, Andrew T.	Andrew	2	I play guitar and enjoy fishing. I am also on the baseball team and love the outdoors.	I enjoyed my Physics class in highschool, because my teacher was great and developed a relationship with all of us.	Play in the major leagues	I am super excited to learn I just like knowing after a class that my knowledge in general is better than when the year started.	I think lockdown browser is the best way to stop cheating except for in person classes. however I think people perform better on tests outside of the classroom in a comfortable environment.

37		Brack, Nyah A.	Nyah	2	I have a minor in business to help with future financial endeavors in the medical field like the possibility of opening my own practice or just learning how to budget!	I have had little to no experience with physics other than the basics. My high school only offered AP physics but the "norm" was to take AP chemistry and AP biology over physics. Physics was also not a required science in order to graduate.	My current dream job is either a dermatologist or ophthalmologist! I am trying to go into medical school with an open mind in regards to specializing but if I had to choose right now those would be my picks!	I think my biggest concern is not having a ton of background knowledge in physics, but I am excited to learn more about it and the details of the physical world I haven't before!	I think with online software there are always going to be those who try harder to cheat than to actually study the material, so finding a "cheat proof" software may be almost impossible. I do think that LockDown Browser does a fairly good job of monitoring and is one of the better options I have used before. It is frustrating to know when others are cheating and making better grades than those who have studied, but there are always those students and I have learned to not let it bother me anymore.
38		Bradley, Donald C.	Cameron	2	I am currently working as an afterschool chess coach at four different elementary schools here in Birmingham!	I was previously in physics back in highschool but I ended up dropping down to physical science at the time. I still find it very interesting but a lot of the concepts don't click for me as easily like in other classes.	I am currently hoping to be a Doctor of some sort. Whether that be through going to Medical School or to potentially join a masters program and teach at a higher level.	I think it is just going to take a lot of work and I am willing to put that work in!	I think that oftentimes people will find ways to cheat in any setting. Whether that be just through a lack of understanding the content, lack of respect for the professor, or just a sense of panic oftentimes. I personally don't know a lot of ways to stop Lockdown from picking up the flag, but I know that there are other options like lockdown browser if cheating is expected.

39		Bradley, Elizabeth G.	Elizabeth	2	I love to play tennis and just being outside! I've coached tennis for the past four summers!	This is actually my first physics class ever. I didn't take physics in high school	0	0	0
40		Browning, Alexander F.	Alex	2	I used to sing a lot, espeically in choral situations. That lead me to singing at carnegie hall and the grand ole opry (in a choir).	I got an A in freshman physics. It wasnt the worst class, but my teacher wasnt the best either. I did take calculus in high school however, and even though our class Algebra related and not calculus related, I feel as though that calculus background should still come in handy.	Most likely a Pediatrician	Having time... I have chemistry 207 (General Chemistry) at 8:00 right before this class, and both are flipped classroom settings. That put a lot of pressure on me early on, so I am going to try my hardest to stay ahead of schedule and not fall behind. I am generally happy to be in physics though.	Yes. I think it does work. I don't care if people cheat, even though there really isnt a way to cheat.

I spent my whole summer in new construction from plumbing to framing on custom homes. As much as I love working with my hands that is not something I want to do for my entire life.

I love physics. I have always struggled with math in general but found physics to be conceptually unique and fun. My highschool physics teacher was an absolute wierdo (in a good way) and made the class so enjoyable to be a part of sometimes I forgot that the concepts I was learning were actually difficult because the instructor was so good.

A pediatrician, I had an amazing pediatrician as a kid that inspired to me to follow the same path. I have always felt that medicine was my calling and somewhere that I would thrive, being a Christian I always wrestled with how medicine and my faith fit together for God's plan. As new parents meet with a physician before a child is born, after they are born, and as they grow and develop - there is always fear and anxiety. I have felt that I am called into such a field because of my way with people, my compassion for others, and just to be a comforting voice in a world full of unknowns for these new parents.

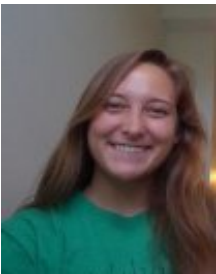

I honestly do not remember much of my previous physics topics (five years ago), but I am excited about this course and the energy you bring to your field.

Ultimately, I think it is probably easy to cheat even such a "fancy" system as this, which is frustrating knowing that some classmates take that advantage - but really they are just handicapping themselves later down the line.

42		Dunstan, Bailey G.	Bailey	2	I love mexican food!	I have previously never taken physics before this course. I am excited to get to learn more about physics and develop a deeper understanding.	I want to be a Physical Therapist when I grow up.	I currently do not have any questions about the class. I have never taken physics before, so I am unsure of what exactly to expect, but I am interested in learning about physics.	I believe that having LockDown Browser with a camera will help people not be tempted to use outside material on quizzes or exams. I do not know how people get around using LockDown Browser with camera to cheat on exams or quizzes. I do care if others around me are cheating because that is not the correct way how to learn materials for class.
----	---	-----------------------	--------	---	----------------------	---	---	--	---

43		Hamilton, Shayla D.	Shayla	2	I have two puppies that I just got a few weeks ago! Their names are Daisy and Champ :)	I don't have a lot of physics experience because my high school professor basically just made Quizlet flashcards for us to study and then he created a test for us to take on Quizlet as well, but I can't wait to learn about what physics really is!	I want to be a physical therapist!	I am a little worried that I might not catch on to physics as fast as I need to because I'm not very familiar with it, but I am excited about learning about how and why things move in my environment the way they do!	I think that LockDown is a good way for professors to ensure that their students don't cheat, but I also know that it's very anxiety-producing to the students who don't cheat. Personally, I don't cheat, but every time I have to log into LockDown it always makes me second guess myself because I know someone is watching/listening to everything I do. I'm sure that people know of ways to get around LockDown (they always come up with something lol) but I don't know of what those would be. I do care if others around me are cheating because that messes up the class average which doesn't accurately represent the knowledge the class has on the materials that were covered on the exam.
44		Harris, Samuel L.	NaN	2	NaN	NaN	NaN	NaN	NaN

45		Harvey, Sophia A.	Sophia	2	I am an avid golfer	I have not had much experience with physics, it was not required to take during high school	A veterinarian	Im excited to see how different it is from natural science. All the math makes me a little nervous	I think there are ways that people try to get around it because there are always people like that. It does make me frustrated if people are cheating because their grade then is not fair to what it should be
46		Hatch, Liliana N.	Liliana	2	I love to rock climb	I had a physics class in highschool but it was very basic and I didn't learn very much.	I want to be a PT	Nothing in particular, but I'm looking forward to the class in general	I think it works pretty well but I'm sure people will always find ways around it. I don't want people to cheat, but when tests are based on working problems it is more focused on your own skill and knowledge.
47		Jones, Summer C.	Summer	2	I think whole milk is the superior form of milk	The only other experience I had with physics was in high school. It was very challenging; it takes a lot for my brain to wrap itself around most things having to do with math and science. Though, in that process I did learn that hard work can pull through in situations like that.	either something within the strength and conditioning field or physical therapy	Mostly just concerned about falling short, but I do have a lot of hope in what will come from semester.	I think it is very helpful. I do feel that whatever mode of test one proctors, people will most likely find ways to cut corners. I kind of care if people around me are cheating, but it hurts them much more than it hurts me.

48		Kinsey, Harper P.	Harper	2	I own a 1967 VW bus.	It was decent. I took it in 9th grade. I wasn't a fan of all the math, but I did well in it.	I would love to be either a family physician or a dermatologist. I am from a super small town, so I would like to pursue rural medicine as well.	I can't think of any questions!	I have heard of people getting around LockDown Browser and still cheat, so I guess it isn't working as well as it should. I have no idea how people get around it. I care when people around me are cheating. It's not fair because I NEVER cheat. It is aggravating when I work super hard to get a good grade, then my classmate puts forth no effort, cheats, then ends up getting a better grade.
49		Lee, Macey K.	Macey	2	I appear very shy but I am very outgoing and an extravert. I also portray that I don't know the answer or that I'm not very smart but I really am smart.	I actually have had no experience with physics in the past. In high school the class was offered but I decided to take a college biology course so I could get college credit instead of taking physics.	When I grow up I want to be a General Dentist!	I work best by slowing going through material though I know it is not possible all the time. I am a visual learner so I have to see the problem be worked out or do it myself to understand what is going on.	I think this is the best idea of keeping people from getting outside help. A girl I used to know tried to use outside help with LockDown Browser and she failed the course because of it so it is good at making sure you do your own work without any other outside help.
50		Lee, Ryan C.	NaN	2	NaN	NaN	NaN	NaN	NaN

2

I am actually quite stubborn so I am afraid to ask questions a lot of the time. I am also left handed, and I quite enjoy physics so far as well as math in general.

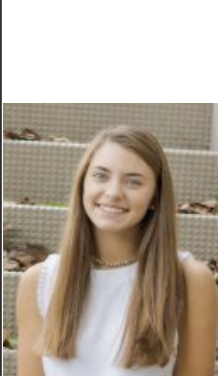

I have no experience with physics.

I would like to be a pharmacist.

My only worry is falling behind. I have no questions thus far as I feel that the syllabus and class have answered everything I would ask. However, in terms of falling behind, I think that the structure laid out is very easy to follow and I think that I will be able to follow it without any trouble.

I think it works quite well honestly. I myself find it to be quite scary in terms of possibly cheating, which is not something I do to begin with, but I think it adds an extra level of stress that deters it even further. I am not aware of how people cheat on lockdown exams, because as far as I am aware those that have tried have failed. \n\n \n\nWhile I do not support cheating and I do not do it myself, I think that if someone else is going to do it then so be it. If you really don't want to learn anything then that is on you. When it comes time for an in person exam, or for you to show your work, you will inevitably fail to do so. And if you had actually prepared for an exam and decided not to cheat than you would be prepared for anything. I do not support cheating, but I don't care if anyone else does it. If you fail to do your own part in implementing what is being taught, then you deserve to fail later on when it really matters.

52		Little, Sarah F.	Sarah Frances	2	I have knocked my two front teeth out eight times and now I want to be a dentist.	This is my first physics class, so no experience. I am excited but very nervous.	a dentist	I am excited because I love math, and I have heard it is a lot of math. However, I am very scared about the abundance of new material and whether or not I will like it and nervous about the difficulty with other classes.	To my knowledge I think it will work, and I personally do not know of any ways for people to get around it. I do care if others cheat because then it gives professors false understanding of what the class needs help with, and then people not cheating do not receive the class help that in all honesty the majority needs.
53		McCann, Kaelyn R.	Kaelyn	2	I am a pole vaulter on the track team with another classmate jed sisco.	I took ap physics in high school and it was really great but I am a little nervous to take a college level physics course.	I want to be a physical therapist for a professional team, preferably baseball, hockey, or football	I have no concerns at this point and I am very excited to learn anything and everything I can! My base knowledge isnt very extensive so I am excited to lay a solid foundation of physics in my educational journey.	I think it is a great system and I dont really know any ways to easily get around it. I think it works really well and if people are willing to cheat, i beleive that will only hurt them in the future. If there is some type of curve, I would definitely care if people were cheating around me, but if there is not, it is a moral problem that they will have to deal with at some point in life. The only issues I have with it is that it sometimes reports me for using a pen and that is mildly annoying.

54		Milton, Carissa F.	NaN	2	NaN	NaN	NaN	NaN	NaN
55		Ngulefac, Sussy N.	NaN	2	NaN	NaN	NaN	NaN	NaN
56		Price, Ashley T.	Tucker	2	I love college football.	No experience. Never took it in high school but am excited to learn!	I want to go to medical school and become a doctor but I do not know what kind of doctor yet.	I am slightly concerned that I won't understand it as much as I would like to.	I hope my classmates do not cheat but I am sure there is probably a way around it but I do not plan on taking any risks by cheating.
57		Rhyne, Brooke K.	Brooke	2	I played softball for years and almost went to go play at Furman University! I have three dogs at home. My favorite kind of candy is Reeces.	I took physics in high school and liked it. It was definitely a class I struggled with but I liked my professor and I put the work in to get a good grade.	I want to be a dentist! The dream is to specialize in pediatric dentistry as well.	I am just worried that because I don't have that much physics experience in the past (besides my one class in high school) that I will fall behind easily. I am excited to learn about physics because lots of dentists have told me that teeth extractions is all about physics!	I think that lockdown browser tests with webcams are very effective. If there is no webcam that is where I would be concerned about other cheating. I don't think that answers will get around. Everyone here values their work and wants to succeed on their own terms, not by using other people's work.

58		Richardson, Margaret E.	NaN	2	NaN	NaN	NaN	NaN	NaN
59		Sarrantonio, Isabella M.	Isabella	2	I am beyond passionate about the ins and outs of working out and nutrition. With that being said I hope to compete in bodybuilding when I finish undergrad.	Well I not so good. I took it my freshman year of high school and believe to this day that my teacher was an actual witch. (She got fired that next year)	I want to be a gastroenterologist, helping all people with gut and colon issues.	I'm excited to learn another science besides biology and chemistry.	Overall, I believe in person exams/quizzes/projects are more controled and provide the best outcome for a student.
60		Scholten, Anna G.	Anna Grace	2	I love to travel! I went to 5 countries this summer! I went to France, Italy, Spain, Monaco, and the Vatican City in Rome. I also go by the name Anna Grace insetad of Anna.	I have no experience with it at all. I have just heard it is hard. But it cannot be as bad a Chemistry lol.	An Optometrist!	I am excited to learn something new I have never studied before and I love math so I think I will enjoy the class!	I think for the most part it works because you cant leave the screen. Unless someone has exactly what they need right there it isnt helpful to try and cheat.
61		Simpson, Ella G.	NaN	2	NaN	NaN	NaN	NaN	NaN

62		Sisco, Jed M.	Jed	2	I love any kind of fishing, specifically ocean, and I Pole-Vault for the Samford Track & Field Team.	No experiance. Never got to taking it in high school.	I would like first go into professional Pole-Vault, and then to get my doctorate and run my own shark lab, teach, or both at the same time.	None as of now, I really like the worksheet in class and lectures on your own time.	I think it will work, but mine has this weird glitch that makes the screen go black every once in while intrrupting my rythm while taking the tests.
63		Soderberg, Kristin J.	Kristin	2	I really enjoy slalom skiing at the lake in the summer and would love to compete on a slalom course some time just for fun.	I did not take a physics class in high school so the only experience I have with it is the little bit that was introduced to me in physical science and chemistry.	I wish to become an occupational therapist.	With no physics experience, I am nervous about how challenging this course will be. I'm prepared to put in the necessary work to understand it well and excited to learn more about the subject in general.	I believe that using LockDown Browser in locations outside the classroom leaves still leaves room for students to wrongfully help themselves on their quizzes. Students can easily put notes on the sides of their computers or stick them on the wall behind their screen after completing the video scan of the room before the test. It frustrates me that students find ways to cheat because it is not only unfair to themselves but unfair to the rest of the students who study and try their best on exams without using outside help.

64		Thomas, Stephen P.	Stephen	2	I am a huge superhero fan and love examples of physics using superheroes.	I had good experiences with Physics in high school. The way it was explained to me made sense.	I want to be a small animal veterinarian.	I have a book on the physics of superheroes that I am excited to read and understand after I have taken this course.	I think it works well for an online format. It works for me because I am not tempted to look up answers or try to take a quiz with a friend while I am being recorded. I typically don't concern myself with the idea of other people cheating as long as I am not involved.
65		Todd, Eleanor J.	Eleanor	2	I got a goldendoodle puppy this summer for my birthday!	The only experience I have had with physics in the past was my senior year in high school and my teacher was not good. We also only had it for like half of the year due to covid.	I want to be a doctor and hopefully go and do medial missions one day!	I think my biggest concern will be making sure I understand the concepts fast enough because of the weekly quizzes.	I think that if someone wants to cheat bad enough they will find a way to. I think that the best deterrent is having in class exams, but in this case for the quizzes is fine. I would rather my peers to not cheat, but I know that as long as I didn't cheat and I did my best than I am content.
66		Travis, Meredith H.	Meritt	2	The origin of why I chose my major and how my experiences led me to the specific patient population I aspire to work with. I am a pre-PT major and I want to work with geriatric patients, specifically neuro (dementia, post-stroke, etc). My grandfather's battle with Alzheimer's introduced me to the disease and	Since I was in my high school's Health Careers Academy, they organized my schedule with as many medical-based classes as possible. Thus, instead of taking physics, they had me take anatomy and physiology. This is my first experience with physics :)	I mentioned this in the first question, but I want to be a Physical Therapist who works with geriatric individuals battling neurological problems. For example, Alzheimer's and post stroke.	I probably have the same general fears that stem from the physics stigma. I think my rocky relationship with math also plays a role in my anxiousness with the class. Since I do not have any experience with physics, I would best describe my feelings as nervous energy.	I think since the application is so sound-sensitive and involves a webcam, it does a decent job at reducing cheating on exams/quizzes. I think determined students will always find a way to cheat whether it is on in-person or online exams. Personally, I do not care if others cheat around me because I am not competing with them. My knowledge and grade is mine, and to each their own. A lot of people who find

the critical role physical therapy played in his journey. I was able to see the capabilities as a professional during a shadowing opportunity two summers ago. A connection with a specific patient in particular allowed me to see that this is what God had called me to do. Many PTs want to work with athletes and say they do not have the patience to "deal with" elderly individuals, but I have always shared a special bond and held the upmost respect for our elders. If I can make their lives any more enjoyable or painless, then I am completely fulfilled.

out others have cheated claim it is unfair, but 1) life is not always fair and 2) actually knowing the information makes you a more knowledgeable and successful individual in comparison to the person who cheated. "You're only cheating yourself."

67		Wasden, Emma G.	Emma	2	I am learning to play the electric guitar (still not very good haha). I also love to sing!	I have no experience. I have never taken any physics, but so far it has been interesting!	I am hoping to be a pathologist. I love histology. It honestly is one of the most interesting things on this planet and so useful to know about.	I am nervous for quizzes. I am not the best test taker, but I do put a TON of work and studying in for each class. I always try the absolute best that I can and appreciate your enthusiasm about physics. You make the class much more fun to learn. I am looking forward to covering a lot of different things. I do not have any specifics I would like to cover, because I do not know a whole bunch about physics in general.	I do not personally think it works. The reason is a few people my freshman year tried to cheat on every test in different ways. If they ever succeeded is beyond me, I am not in their major, so I do not care. I just think if people really want to cheat, they will. I care if others cheat and do better than me, because it makes me feel as if all my hardwork is for nothing. It can be really frustrating, and that is a problem I have had in the past. I get so frustrated at them for not putting in half the work as me!
68		Wheeler, Blair E.	Blair	2	I have a twin sister who goes to Liberty University!	I have had no experience with physics. we only had AP Physics in high school and I was scared to take it haha!	I want to be a pediatric physical therapist in a hospital/acute care setting.	I am worried about the math part of learning physics. I am pretty good at algebra, but have never taken any calculus. Having watched a friend take physics in high school this is what she seemed to struggle with the most.	I think the webcam aspect is a deterrent for people getting outside help on quizzes and exams. I think many times it has worked, but I know of people finding ways to get around it when we all were taking chemistry ( i don't know of how specifically). It can be frustrating if people around me are cheating because then the scores may come out a lot higher and those not cheating may score lower than those who are.

69		Wright, Hannah F.	Hannah	2	I love scuba diving, and once our instructor had to fend off a shark for us! That was so cool	Not wonderful, it was just a little overwhelming... sometimes all the equations could be a bit much. However, I think the theory behind everything is fascinating.	I guess I'm still deciding, but I would definitely like to work in healthcare in some way.	Just being able to apply the equations correctly can be a bit daunting for me. However, I am excited to learn more about all of physics in general, since I don't have a lot of experience with it. I would love to know the interesting applications of things, and maybe any new discoveries that are relevant to the class. Oh, and definitely any mysteries that physicists are still trying to figure out!	I like Lockdown Browser, and I think it really does help serve the purpose of letting students be able to take quizzes according to their own schedule. Honestly, people don't really talk about Lockdown Browser, which is kinda nice because it allows you a little bit of privacy. Plus, since questions are usually randomized, I think it helps everyone actually learn more because you all get different versions of similar ideas.
----	---	----------------------	--------	---	---	--	--	---	--
